Israel Friday

Senior AI/ML & Software Engineer | LLMs & Agentic AI | MCP
Developer | RAG Architecture | Python, Node.js, AWS | Ex-Lead
Engineer
United Kingdom

Summary

For Ikechukwu, delivering a project's requirements is non-negotiable. A Senior AI & Software Engineer with hands-on expertise architecting high-throughput cloud infrastructure and building production-ready agentic AI systems. Able to lead and follow, possesses extensive management experience and knows how to see a project through all stages of execution. Proven track record in customizing autonomous agent workflows, integrating Model Context Protocol (MCP) for tool and system interoperability, engineering retrieval-augmented generation (RAG) platforms using vector databases (Pinecone, Pgvector), and scaling distributed backends with Python, Node.js, and AWS; consistently optimizing operational workflows and driving measurable improvements in user experience and business performance.

Experience

UPlanIt LTD
Artificial Intelligence Engineer
October 2024 - September 2026 (2 years)

- Customized and integrated agentic AI models to automate onboarding, billing, and CRM workflows for over 30,000 users.
- Developed AI-powered assistants using retrieval-augmented generation (RAG), increasing user engagement by 45%.
- Led a team in building a scalable, cloud-native learning platform, contributing to £600k revenue growth.
- Implemented automated training delivery platforms, reducing manual content creation time by 60%.

Penaid Limited
Senior Software Engineer
February 2021 - January 2024 (3 years)

Optimized system infrastructure by leveraging AWS Serverless technologies and SQS to build highly scalable and responsive components, resulting in a 25% reduction in server maintenance costs while significantly improving system performance and user experience.

Designed and developed the backend for the loan management software using Node.js, writing clean, efficient, and thoroughly testable code to ensure long-term system reliability and maintainability.

Managed and secured critical loan data using MongoDB, implementing strategic optimization of data retrieval and storage processes to support high-performance application needs.

Championed the implementation of software development best practices, including rigorous code reviews, Continuous Integration (CI), and automated testing, establishing a more robust development pipeline and leading to a noticeable reduction in application errors.

Econnect Netpower Limited

Lead Software Engineer

October 2017 - May 2020 (2 years 8 months)

Led backend development using Node.js and PostgreSQL to support scalable databases and high-traffic applications. Managed stakeholder communication across engineering, product, and business teams to ensure project alignment and transparency. Deployed applications via CI/CD pipelines, accelerating release cycles and improving system reliability. Upgraded legacy systems and resolved complex technical issues, reducing downtime and improving user satisfaction. Coordinated user feedback collection and implemented process improvements that increased operational efficiency by 30%. Provided technical mentorship to junior engineers, supporting their growth and skill development.

Education

Nnamdi Azikiwe University

B.Sc, Computer Science · (2013 - August 2017)

Udacity

Cloud DevOps Engineer Nanodegree Program, Computer Science · (June 2022 - August 2022)

Zero To Mastery Academy

Next.js

Nnamdi Azikiwe University

Bachelor of Science, Computational Science

University of Sunderland

Master of Science, Cybersecurity · (September 2025 - 2026)
